MISSION STATEMENT

VISION

We provide leadership in an efficient, coordinated and people-oriented rural healthcare system. We encourage personal and community responsibility for health and wellness. We are a key element in a healthcare system that serves the needs of this community.

MISSION

We are committed to providing high quality, patient-centered, cost-effective healthcare in a caring and professional environment.

PHILOSOPHY

Every member of our healthcare team will play an active, participative role that effectively utilizes the skills and talents of each. People are our most important resource. We will encourage professional development and a code of conduct that will achieve a level of competence and morale that will attract and maintain the highest quality staff.

We will consistently work toward a level of care that results in patients recommending us and returning to us for their healthcare needs.
